

ULTRA-LIGHT. ULTRA-FAST.

Born to push the very limits of ultra-lightweight gaming, the Razer Viper Mini takes up a smaller form that remains just as big in performance. Shortening its length and grip width, we've worked with enthusiasts and esports athletes to hone its design even further, ensuring that absolute control now belongs in the hands of more gamers—so take hold of our leanest and lightest gaming mouse yet.

61G ULTRA-LIGHTWEIGHT DESIGN

The ambidextrous chassis has shaved off more weight, so you can enjoy even swifter swipes, yet remains as durable and solid as ever. Recommended for gamers with small to medium hand sizes, this ultra-lightweight gaming mouse is best suited for those who favor claw or fingertip grip styles.

RAZER™ OPTICAL MOUSE SWITCH

Utilizing an infrared light beam to register every click, the switches in this light gaming mouse actuate with an industry-leading response time of 0.2 milliseconds. Because it no longer requires traditional physical contact, this form of actuation removes the need for debounce delay and never triggers unintended clicks, giving you closer control and flawless execution.

RAZER CHROMA™ RGB UNDERGLOW

With 16.8 million colors and a range of dynamic lighting effects you can program or create from the ground up via Razer Synapse 3, the Razer Viper Mini displays no shortage of character and personality as part of your battle station.

RAZER SPEEDFLEX CABLE

The Razer Viper Mini's cable has greater flexibility and is designed to produce minimal drag, so that you can perform quicker, more fluid swipes for a higher degree of control.
