

Headphones designed for staying present

Our story

How we got our start?

Bone conduction technology was introduced into the AfterShokz debut product line in 2011. For the first time ever, AfterShokz had made the unique listening experience provided by bone conduction technology available to the general public.

What makes our product unique?

We're disrupting the headphone industry with our innovative open-ear design and patented bone conduction technology. The result is a premium listening experience while your ears stay open to your surroundings for maximum situational awareness, safety, and connection.

Why we love what we do?

Our team is on a mission to enhance lives through our technology. We work to bring you the best combination of performance and quality, continuously improving our products to deliver safety, comfort, and stability, while inspiring connectedness and impacting lives.

Product Description

Featuring the most advanced bone conduction technology to date and open-ear comfort, Aeropex Mini wireless headphones are designed to deliver high-quality audio all while keeping you connected to your surroundings. Aeropex Mini are designed with a .5-inch shorter band size than standard Aeropex for a more snug fit.

AEROPEX MINI
